Benid-Alghar, KW | +965 95544145

University of Tabriz CS graduate with a background spanning logistics and automotive diagnostics. Currently building developer tools, multi-agent AI, and open-source software, with a dedication to advancing education and diabetes care.

Work Experience

Computer Diagnostic & Electric Specialist

Jan 2024 - Present

Nile Garage | Kuwait

Applied AI-assisted diagnostics and ML-informed ECU tuning to resolve complex vehicle performance issues, combining specialized automotive software with large language models to improve fault resolution speed and accuracy.

- Diagnosed vehicle faults using specialized remapping tools and AI-assisted analysis (ChatGPT, Gemini), reducing identification time and optimizing engine output.
- Applied AI-generated failure models to predict component degradation patterns, proactively reducing vehicle downtime.

CEO & Co-founder

Sep 2022 - Dec 2023

Yonko Global Forwarding Company | Kuwait

Founded and launched a freight forwarding startup, embedding AI tools and Python automation into core operations from day one — enabling a lean team to manage multi-jurisdictional logistics at scale.

- Integrated ChatGPT, Gemini, and Python scripts into documentation, route optimization, and client communication workflows, reducing manual overhead significantly.
- Managed end-to-end freight compliance across sea, air, and land operations, using AI to accelerate regulatory research across multiple jurisdictions.

Logistics Officer

Nov 2021 - May 2022

[Khalid Sultan / Natureland](#) | Kuwait

Managed GCC-wide import operations for an organic food supply chain, introducing AI-assisted data processing and Python automation to improve cost analysis and shipment reporting accuracy.

- Automated landed cost analyses and shipment reporting using Python scripts and AI tools, identifying cost-saving opportunities across GCC import operations.
- Negotiated rates with 8+ international shipping lines and air freight agents, achieving a 15% annual reduction in freight costs.

Purchase Executive / Customs Brokerage Liaison

Nov 2019 - Oct 2021

[Afrah Al-Khaleej Co.](#) | Kuwait

Managed procurement and customs workflows for a building materials trading company, applying AI tools to accelerate technical document analysis, supplier research, and compliance reporting.

- Used AI tools to analyze supplier technical documents and automate monthly procurement reports, improving decision speed and regulatory compliance.
- Applied AI-driven process analysis to streamline customs approval workflows (PAI, EPA, MOC, MOH, MOI), increasing procedural throughput.

Projects

GeminiSensei

Feb 2026

Desktop-native AI engineering assistant developed for the Google DeepMind Gemini Hackathon, designed to enforce rigorous CS education through a stateful multi-agent architecture rather than passive Q&A

- Implemented a "Strict Protocol Loop" using LangGraph that refuses to provide code until the student demonstrates theoretical understanding, mandating live verification to prevent hallucination.
- Integrated DevOps practices, including containerization and CI/CD deployment pipelines via GitHub Actions, bridging research prototype and production-ready system.

dotfiles-maintainer

Jan 2026

AI-native MCP server for managing developer configuration files, built to explore agentic system design and the Model Context Protocol in a real-world tooling context.

- Implemented semantic memory and context-aware drift detection to maintain configuration consistency across environments
- Gained hands-on experience designing tool-use contracts and state management in an agentic architecture

CodeT5+ Fine-Tuning for Code Generation

Mar 2024

Independent deep learning project fine-tuning CodeT5+ 220M for domain-specific code generation, focused on understanding the full transfer learning pipeline from pre-trained model to adapted output

- Applied domain-specific training data to adapt model behaviour, gaining practical experience with Hugging Face Transformers and PyTorch training loops.
- Developed understanding of model evaluation, overfitting mitigation, and inference optimization for code generation tasks.

XOR Neural Network with Backpropagation

Apr 2020

Implemented a fully connected neural network from first principles across three languages, without the use of ML frameworks, to build foundational understanding of how neural networks learn.

- Manually coded forward pass, loss calculation, and backpropagation algorithm, including gradient descent and weight updates.
- Reproduced identical results across C++, C#, and Python, reinforcing understanding of language-agnostic mathematical foundations.

Core Skills

Agentic AI & ML: LangGraph, LangChain, PyTorch, Hugging Face Transformers, Gemini API, Model Context Protocol Protocol (MCP), Fine-Tuning

Core Languages : Python, TypeScript, C++

Ship & Sustain: Docker, GitHub Actions, JJ (Jujutsu), Linux

Education

Self-Directed Continuing Education

Relevant Coursework: Mathematics for ML & Data Science Specialization, ML & Deep Learning Specialization

University of Tabriz

Sep 2014 - Jun 2019

B.Sc. Computer Science

GPA: 14.67/20

Languages

Arabic (Native), Persian (Native), English (Fluent)

Certificates

Data Science Math Skills

Apr 2024

Duke University
